

## MCAT, LSAT and Physics Bachelor's

Physics majors pursue a wide variety of career paths, many of which are not what you might expect. Some pursue advanced training by applying to graduate schools, medical schools or law schools. The data in this report show that the physics majors who applied to either medical schools or law schools in the 2012 academic year scored quite well as a group on their admission tests. Although one should choose a major based on personal interests and goals, these data show that physics can be an excellent entry degree for programs outside of physics.

### About the MCAT

The Medical College Admissions Test (MCAT) has three sections of standardized multiple choice questions with an additional writing sample comprised of two essays. Each section has a potential score range of 1-15.

### About the LSAT

The Law School Admission Test (LSAT) is a half-day, standardized test administered four times each year at designated testing centers throughout the world. All law schools approved by the American Bar Association require applicants to take the LSAT as part of their admission process. According to the Law School Admission Council (LSAC), raw scores are converted to an LSAT scale that ranges from 120 to 180, with 120 being the lowest possible score and 180 the highest possible score. According to US News & World Report, the median LSAT score for applicants accepted by all 193 ranked schools is 157, and the median for applicants accepted to the top 13 schools is 170. If you're interested in a specific school, you can check the LSAC website for a matrix of LSAT scores by GPA, showing the probable likelihood of acceptance for each school.
