Physics 132 Entropy and Temperature Lab Instructions

The entropy laboratory requires you to run a program called *Equilib.exe*. To obtain and run that program follow the instructions below.

1. Enter the following address in the address box of your browser.

   `http://www.physics.pomona.edu/sixideas/old/programs/Equilib.exe.zip`

   You should see a graphical user interface (gui) entitled `This PC`. Save the file to the `Desktop`.

2. Double-click on the Desktop icon for `Equilib.exe.zip` and get another gui of the zip file contents.

3. Double-click `Extract-all`.

4. Double-click `Equilib.exe` and you should get a gui to run the code.
