

Real-Time Bibliography

Dean Croushore

November 2022

1 Introduction

This is my bibliography of real-time data research. As I noted in my literature survey in 2011, “Real-time data analysis refers to research for which data revisions matter or for which the timing of the data releases is important in some way.”¹

In this listing, I am limiting the papers to those related to data background (written material on how data are constructed), data revisions (research on the size and importance of data revisions), structural modeling (how data revisions affect our research on the structure of the economy), forecasting (how forecasts are affected by data revisions), and monetary and fiscal policy (how policy decisions are influenced by data revisions or uncertainty about data, as well as how policymakers should think about data revisions and uncertainty). This bibliography does not cover forecasting methods that do not involve consideration of data revisions or their implications.
