Prof. Emory Bunn
Department of Physics
University of Richmond
Richmond, VA 23173

Dear Ted,

The NSF Major Research Instrumentation proposal “MRI: Acquisition of a computing cluster for nuclear physics, astrophysics, and computer science research at the University of Richmond” proposes to perform simulations of the MBI and EPIC instruments. The proposed investigations will be valuable in the ongoing collaboration between my research group and co-PI Bunn on these experiments. My research group and I will participate in the proposed simulations by providing technical guidance and code as available.

Sincerely,

Gregory Tucker
Associate Professor of Physics
