

- ① Generated scripts to add 5-nA runs with background files.
- ② Reconstruction of denoised files was VERY slow,
 $\approx 4.00 \pm 0.04 \text{ sec/evt.}$
- ③ Raffaella suggested to keep data files in the remote, user directory (already doing that) and ...
- ④ Remove the Central Detector services from the yaml file.
 - Removed services: CVTFP, CTOF, CND, BAND, CVTSP.
 - Worked! Reconstruction time dropped to $\approx 1.57 \pm 0.03 \text{ sec/evt.}$
- ⑤ Chris Dilks (during Software Office Hours) suggested increasing the heap allocation for recon-util. He created a version with twice the heap space ('java -Xmx1536m' to 'java -Xmx3072m').
 - Submitted to the farm and it crashed (details below).
 - It worked when I ran it interactively on the farm (details below).

6 Error message from priority queue:

```
./recon-util-with-more-heap: line 14: 3432090 Killed  
java -Xmx3072m -Xms1024m -XX:+UseSerialGC -cp  
"$CLAS12DIR/lib/clas/*:$CLAS12DIR/lib/services/*:$CLAS12DIR/lib/Utils/*"  
org.jlab.clas.reco.EngineProcessor $* slurmstepd: error: Detected 1  
oom_kill event in StepId=54264217.batch. Some of the step tasks  
have been OOM Killed.
```

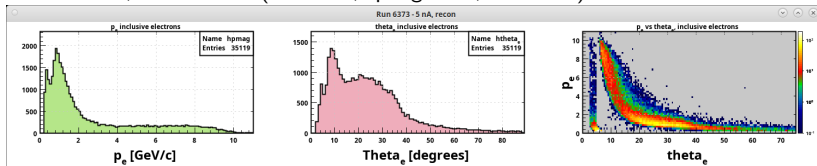

7 Results from interactive running.

- Compared file dumps and results are similar to standard version.
- Average reconstruction time was 133 ± 7 ms!!
- Emailed Chris with these results.

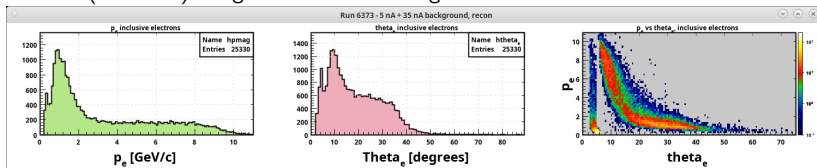

Additional Slides

Combine Low-luminosity data with Background runs

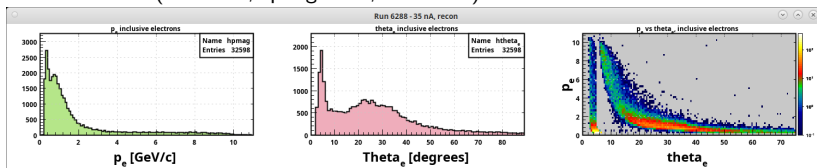

Clean, 5-nA results (run 6373, spring 2019, 10.6 GeV). First 50k events.

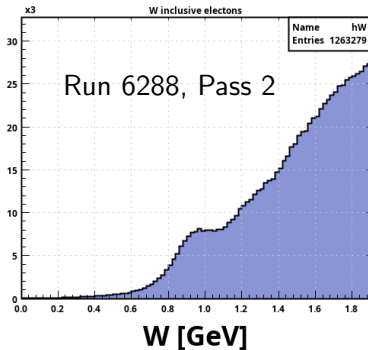

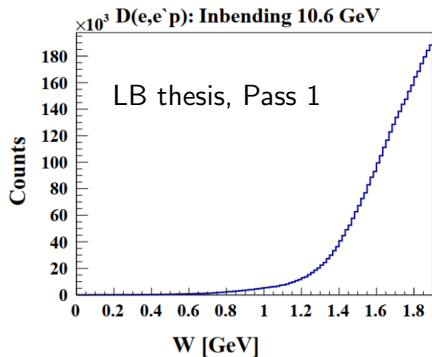

5-nA data (run 6373) merged with 35-nA background and reconstructed. First 50k events.

35-nA data (run 6288, spring 2019, 10.6 GeV) reconstructed. First 50k events.

Some Very Preliminary Results

Next Steps

- ① Continue checking results in initial analysis.
- ② Develop scripts for ifarm to analyze complete files.
- ③ Getting analysis using Lamya's code working.
- ④ Simulation to study luminosity effects.

Initial Cuts on Lamya's Plots

electron	proton	neutron
pid = 11 v_z vertex position $N_{ph} > 2$ PCAL fiducial V, W > 14 cm cut DC fiducial cut for 3 DC regions SF vs. $P_{ele} \pm 3.5\sigma$ Diagonal cut chi2pid $ \chi^2 < 3$ cut Minimum PCAL $E_{dep} > 60$ MeV	Positive charge particle hit calorimeter	Neutral charge particle hit calorimeter

More distributions - Run 6373, 5 nA, sprint 2019, 10.6 GeV
