Paul Hargarten,
Biostatistician, UR Chemistry & BMB Alum

"Biostatistics: A Different Career Path for Biology, BMB, and Chemistry Students"

Common career goals for biology, BMB, or chemistry majors include becoming a medical doctor or designing drugs. However, after graduating with a BMB and chemistry double major, I have chosen a different career path: biostatistics. In short, biostatistics is the study of the scientific method. This talk will highlight the interesting aspects of the profession and describe my career journey. By listening to this seminar, the goal is to encourage current biology, BMB, and chemistry students to consider biostatistics as a plausible career option.
